

Technology introduction

Dec-2021

Introduction

Integrated molding of long pipes and flanges.

To join Long pipe and flange welding is the most common method.
However, we propose integrated forming by cold forging.

Advantages

- (1) Shorter process
- (2) Cost reduction by eliminating welding cost.
- (3) Quality stabilization due to integration.

Customer considering integrated molding products.

Product specification.
Material : A6061
Length : 185mm
Texture : T6 treatment.

In the last issue of "September 2021", we introduced a forging case study using a newly introduced long stroke press.
In this December issue, we introduce an example of integrated molding using a long stroke press.
